

Digijaks addresses global cyber security needs and is a strong driver in bringing the best of the best to bear to deal with the global threat. This includes a concentration on oil and gas, satellites and ground stations and socially engineered attack prevention, attribution and response.

Digijaks has a global reach through real time response partnerships. We have partnered with other companies that provide the depth of training that ranges from geo spatial intelligence; to SCADA and installation software/hardware defenses as well as the combination of physical and cyber security as one.

Digijaks has created strategic partnerships with other cybersecurity and private intelligence firms in the US, EU and other countries. We have created tactical and strategic partnerships in the form of rapid response relationships with private intelligence, private special forces, other cyber security and deep web analytics companies. This allows us to operate in stealth, without leaving a large footprint.

This allows a rapid global response, to almost any type of cyber incident as well as in depth training during and after any cyber event. Our experts are drawn from government, military, intelligence and corporate areas of operational history. We have forensic and technical analysis people as well as intelligence analysts and threat assessment capabilities.

The Founder of [Digijaks](#) is a Member of the [California Governor's Cyber Security Task Force](#), and Subject Matter Expert for Cyber Security to U.S. Federal Agencies. Our partners in Israel and UK make up some of the brightest and most forward leaning cyber security firms in the world. This includes aviation, utilities, data centers, drones, and hyper spectral companies. The company specializes in stopping socially engineered attacks, and the resultant public reputational breach that is almost always associated. The company is actively involved with threat mitigation, early threat detection, as well as complex social network analysis as it relates to cyberwar.

*Clients include U.S. Government Agencies, Fortune 500 companies, US Politicians, CEOs, Hollywood Celebrities and Non Profits.*
